EDUCATION

University of Georgia

Aug 2025 - May 2028

B.S. in Computer Science

Athens, GA

Relevant Coursework: Data Structures; Software Development

GPA 3.73

Discrete Mathematics; Theory of Computation

Awards: Summer 2024 GSU President's List, Fall 2024 GSU President's List, HOPE Scholarship

SKILLS & INTERESTS

Programming Languages: Java, JavaScript, CSS, Python, C++

Software Frameworks/Tools: Eclipse, Visual Studio Code, Git/GitHub, Blender, React Native

Skills: Data Analytics, Database Optimization, Software Development

Linguistic Knowledge: Turkish(Native), English (Advanced)

EXPERIENCE

Undergraduate Research, University of Georgia

May 2025 - August 2026

- Collaborated with an interdisciplinary research team to analyze how generative AI is reshaping music creation, distribution, ownership, and rights management, including metadata, licensing, and royalty flows for compositions and sound recordings.
 - Evaluated AI-native music technologies, including generative platforms, synthetic voices, training-data practices, and authorship models, while identifying legal, technical, and economic challenges involving copyright, creator compensation, and stakeholder incentives.
-

PROJECTS

UGA Hacks Food Tracking App

Spring 2026

- Developed the frontend of a food-tracking web application using React Native and Expo, building user-input forms, dynamic list views, and state-driven interface updates.
- Integrated the frontend with a REST API using asynchronous GET and POST requests, processed JSON data, and collaborated with backend teammates to debug responses and deliver a functional end-to-end application.

Virtual Hand-Mouse

September 2026

- Built a real-time webcam-based mouse controller using OpenCV and MediaPipe for hand tracking, NumPy for 3D landmark geometry and screen mapping, and PyAutoGUI for cursor movement, left/right clicks, double-clicking, drag-and-drop, and variable-speed scrolling.
- Implemented state-based gestures, personalized calibration, activation/release thresholds, and cursor smoothing to reduce jitter and unintended inputs, with visual feedback and drag release on tracking loss.

Interactive Portfolio Website

August 2026

- Developed a responsive portfolio website using React, Vite, and CSS, building reusable, data-driven project components with structured navigation and contact sections.
- Implemented interactive flip cards with React Hooks, scroll-triggered animations using IntersectionObserver, and custom hover effects, incorporating semantic HTML and ARIA attributes to support accessibility.
